

Brazilian E-Commerce Public Dataset

Project Title:

Analysis of Sales, Customer Behavior, and Delivery Performance in E-Commerce Business

Objective of the Analysis:

Gain insights into key e-commerce metrics: sales, customer satisfaction, customer behavior, and delivery efficiency, in order to identify opportunities for business improvement.

Data Scope:

The dataset contains multiple related tables (customers, orders, products, categories, reviews, deliveries, payments).

Analysis Requirements:**1. Sales Analysis**

- Display total number of orders and revenue by:
 - Months
 - Quarters
 - Years
- Visualization of sales trends over time

2. Category Analysis

- Best-selling categories (by number of products sold and revenue)
- Categories with the highest and lowest average user ratings
- Visual representation of each category's share in total sales

3. Customer Satisfaction Analysis

- Average user rating by category and year
- Rating distribution (number of 5, 4, 3, 2, 1-star ratings)
- Correlation between number of orders and user rating

4. Payments

- Most common payment methods (cash, credit card, etc.)
- Most frequently selected installment options by customers
- Share of each payment type in total revenue

5. Customer Behavior

- Percentage of returning customers (repeat purchases)

Delivery Format:

- Import data from CSV files into MS SQL
- Clean and organize the data into views by using SQL, then import it into Power BI and create dashboard.
