

Conclusions from Warehouse Employees' Performance Dashboard

KEY INDICATORS BY AGE CATEGORY

1. 🕒 Average NotWorking Days (Absences)

- Employees aged 45+ have the highest absences throughout the year, especially pronounced in months 5, 6, and 9.
- The 35-44 age group has the fewest absences in almost all months.
🔍 Conclusion: Middle-aged employees have higher presence and potentially greater availability for work.

2. 📦 Number of Articles per Order

Age Group	Average Performance	Stability	Comment
25-34	● Moderate	✅	High Reliable, without extremes
35-44	● Moderate	✅	High Experience + reliability
45+	🔍 High potential (peaks)	❌ Low	Uneven performance – excellent when available, but often variable

3. 📊 Average Number of Articles

Age Group	Productivity	Stability	Trend
25-34	● Medium	● Growing	📈 Significant growth
35-44	● High	✅ Stable	📊 Consistent
45+	● Variable	❌ Low	📉 Declining since July

4. 📈 Error Percentage

Age Group	Error Rate	Stability	Conclusion
25–34	● Low (0.1–0.18%)	✓ High	Reliable and consistent
35–44	● Very Low	✓ High	Most precise team
45+	● Highest (up to 0.4%)	✗ Low	Potential quality risk

The 45+ group has potential for excellent work quality, but clearly does not respond equally well under all conditions. Likely factors:

- Workload (e.g., peak months)
- Physical strain or fatigue
- Task complexity

SUMMARY EVALUATION BY POSITION

Position	Efficiency	Quality	Attendance	Work Volume	Contribution (€)	Comment
Senior Warehouseman	⬆️ High	✓ Fewest errors	✓ Good presence	⬆️ Largest	💰 High	Balanced, most valuable
Warehouseman II	● High	✗ Many errors	✗ Frequent absences	● Medium	💰 Highest	Needs supervision, but generates revenue
Warehouseman I	● Stable	✓ Decent quality	✓ Present	📄 Smallest	💰 Lowest	Good basics, lower contribution

Conclusion

- Errors increase with salary – especially in the middle/higher pay ranges (€7,314–9,517), which suggests:
 - Higher-level tasks/responsibilities
 - Larger workload → increased risk of errors
- The salary group €6,212 – 7,313 (yellow) seems the most optimal:
 - Low error rate, stable performance, good balance between workload and results
- The highest salaries (gold) are not necessarily the most efficient, but they can be the most influential in key months

Recommendations for further action:

- Monitor if high salaries come with excessive workload – a possible sign of needing support or task redistribution
- Further investigate why the middle salary group achieves such a good balance – could serve as a training model for others

Consider salary increases for Barica Cargonja, Dalibor Prpić, Božica Ilijić, Bara Husnjak, Tomislav Brletić, and Jadranka Rumora – because they demonstrate:

- High performance,
- Strong dedication,
- Low salary compared to colleagues.

Recommended employees for discussion due to poorer performance:

Name	Note
Zdenka Radošević	Highest error percentage
Martin Tešija	Expensive, below average
Dino Jurlina	Below average on KPIs

Name	Note
Manda Vidas	Good performance but borderline
Jadranka Rumora	Low salary but underperforming
Laura Babić	Expensive, lower productivity
Martin Pongrac	Below average in everything except salary
Joško Puškarić	Below average output, high salary

Note:

These discussions should **not be disciplinary**, but rather focus on:

- Understanding causes (e.g., technical issues, training, workload)
- Providing opportunities for improvement
- Setting goals for the upcoming period

FOR APPOINTMENT WITH LAURA

Laura, thank you for joining us today.

We'd like to take a moment to recognize both your contributions and explore some areas where we can provide support or make improvements together.

◆ What You're Doing Well:

- You're holding a **Senior** position, which reflects your experience and the trust placed in you.
- Your **average monthly salary (€10,400)** is aligned with that level of responsibility, and your **8 years** of experience at the company confirm your stability and dedication.
- At **44 years old**, you bring maturity and valuable insight to the team.
- We've noticed **high productivity**, especially in months 6 to 8, where your output of processed articles was notably strong.
- Also, your **articles per order** ratio has been improving recently — that's a great sign of increasing efficiency.

◆ **Where We See Some Challenges:**

- We've observed a **rise in error percentage** in recent months, particularly after month 4. This may suggest fatigue, task complexity, or something else — we want to understand that better.
- You're averaging nearly **10 overtime hours per month**, which raises the question of whether your workload might be too heavy and if that's impacting performance.
- There are **some fluctuations in your time off** as well, so it may be helpful to look into how rest and recovery are being balanced with your work demands.

🧠 **How We'd Like to Support You:**

- We'd like to **hear your perspective** — are there specific challenges or bottlenecks contributing to the increase in errors?
- Do you feel **overloaded or under pressure**, and is there something we can do to help balance that?
- Going forward, we'd like to work with you to **set some focused goals**, particularly around **error reduction** while maintaining or even enhancing your productivity.
- Finally, if you feel you need **additional training, tools, or a shift in workload**, we're open to discussing how we can support that.

Your contribution is valuable, Laura, and this conversation is not a criticism — it's an opportunity for collaboration. We're here to help you succeed and continue to be a strong performer in the team.

Let us know your thoughts.
